SUMMARY

Data engineer with 15+ years designing and running the data infrastructure behind marketing and media analytics. I build end-to-end systems, from API ingestion and warehouse modeling to automated client-facing reporting, and set the standards for naming, taxonomy, and data quality that make that data trustworthy enough to power AI-driven reporting. Hands-on in SQL, Python, dbt, BigQuery, PostgreSQL, and Azure Data Factory/Fabric. I document what I build and teach teams to own it, so the platform scales beyond me.

CORE SKILLS

Languages	SQL (PostgreSQL, BigQuery), Python, JavaScript, Google Apps Script
Data platform	dbt, Snowflake, BigQuery, PostgreSQL, Azure Data Factory, Microsoft Fabric, AWS (S3, Redshift), Funnel.io, Zuarbase
BI & analytics	Tableau, Looker Studio, GA4, Google Tag Manager
Practices	Pipeline architecture, ELT and API ingestion, data modeling, data quality and governance, taxonomy and UTM standards, cloud migration, Git/GitHub, documentation and enablement

EXPERIENCE

Lead Data Engineer · Team LEWIS — Sep 2023 – Oct 2026

Boston, MA · Global marketing agency

Owned the data platform behind reporting for the agency's US digital clients in B2B tech and retail, with global scope across AMER, APAC, and EMEA.

- Replaced manual Google Sheets reporting with automated Funnel.io and PostgreSQL pipelines, **eliminating ~40 hours/month of manual data entry** and **cutting reporting turnaround from ~7 days to 48 hours**.
- Architected and maintained **~250 data pipelines** feeding **10 production dashboards across five enterprise clients**, plus automated weekly reporting for every client.
- Led the business case and migration plan to converge regional data infrastructure onto **Azure (Data Factory / Fabric)**, including a proprietary client-facing reporting portal to reduce reliance on Tableau and Looker per-viewer licensing.
- Overhauled the database structure and moved all pipeline code into a version-controlled GitHub codebase with documentation for every pipeline.
- Set **company-wide data standards** for paid media naming conventions, UTM taxonomy, and data inputs, adopted across account teams and regions.
- Built the data-quality foundation that let the agency adopt **agentic AI reporting tools** with confidence in the accuracy of agent output.
- Designed and refactored SQL models for paid media performance (LinkedIn spend joined to leads and pipeline, demand-gen splits, fiscal-quarter metrics), with reconciliation scripts to validate changes.
- Negotiated data vendor contracts and set client pricing for data services; coordinated cross-regional data projects across the US, APAC, and EMEA.
- Implemented web analytics tracking (GTM, GA4, consent-gated tagging) and resolved attribution discrepancies between tagged and untagged traffic.
- Modernized client dashboards in Tableau and Looker Studio for consistency and faster insight.

Senior Data Engineer · Havas Media Group — Dec 2012 – Jul 2023

Greater Boston

Built and ran multi-channel marketing data pipelines on an AWS stack (S3, Redshift/PostgreSQL) and Snowflake, with Funnel.io ingestion and Tableau reporting, for global brands.

- Built SQL pipelines unifying **paid media (programmatic, paid social, paid search)**, **organic social**, **organic search**, and custom client sources into a single cross-channel reporting model.
- Supported **seven enterprise clients** in **travel, finance, automotive, and luxury retail**, delivering regular reporting to stakeholders in regions around the world.
- Staged raw source data in **Amazon S3** and modeled it in **Redshift/PostgreSQL** and **Snowflake**, with **Funnel.io** for platform ingestion and **Tableau** dashboards on top.
- Owned documentation and training for the Data Engineering team, standardizing how pipelines and reports were built and supported and speeding up onboarding.
- Ran the team's JIRA help-desk queue, triaging and resolving client data requests on deadline.

Communications Media Manager · Girl Scouts of Eastern Missouri — Nov 2011 – Nov 2012

St. Louis, MO

- Built and sent HTML email campaigns to more than 40,000 members and volunteers (10,000+ volunteers and 30,000 council members).
- Planned the information architecture and sitemap for the council's website relaunch.
- Grew the council's social media presence and produced press releases, media alerts, photography, and articles for council-wide events.

LEADERSHIP

Convention Chairperson · Anthro New England, Inc. — Jan 2021 – May 2024

Boston, MA

- Led a staff of 100+ to deliver an annual convention for 4,500 attendees.
- Negotiated hotel contracts, wrote new organizational policies, and resolved live operational issues.

EARLIER CAREER

Digital editor roles at the Boston Herald and Gloucester Daily Times (2008–2011), and managing editor of SB Nation's Stanley Cup of Chowder (2011–2015), where I led a team of writers and used Google Analytics to track and grow readership.

EDUCATION

Boston University · B.S., Journalism, College of Communication, 2008
